

Route the GPS cable, iPhone cable, and external USB extension cable through back to passenger side floor before you install the radio.

Important step **!!!** Install start button switch panel before you put radio in because you cant do it afterwards..the radio is bigger on sides (since its 8" display) will block it.

Put the radio in place but do not put in the bolts yet. Turn on the radio and test all functions including backup camera, and GPS before you tightened the bolts.

each side of radio

When everything checks out tighten the 2 bolts on

Now install the trim around the radio back on.

Install the trim with the cup holder on.

Install the trim around the shifter on. Note: I didnt notice till now that you do not have to remove the shifter knob to remove the trim around it (mine is missing from picture).Make sure all the trim is pushed in/down all the way around flush.

Now your radio is installed. Finish up the routing of the GPS antenna, iPhone cable, and external usb extension cable from passenger side floor to the desired locations.

I routed and place my GPS antenna by passenger side front little triangle window corner just in front of vent. It is held on by velco. The other two cables are in cubby area under the shifter where the cigarette lighter is.

Once you finish wiring then you can set your radio stations, time, region format,GPS and the most important is the steering wheel buttons assignment. You can assign the buttons on steering wheel to the function of radio. Example..not that you want but you can assign volume on steering to changing input on radio. Settings the buttons up was very easy to do.

The NAV button doesn't work out of the box. You will have to go to settings then select SYGIC gps program as your NAV. I will post another page for this step.

ENJOY YOUR NEW RADIO ...I REALLY LIKE THIS RADIO A LOT. IT IS FAST AND RESPONSIVE CONTROLS AND SINCE IT'S ANDROID YOU CAN INSTALL YOUR APPS ON IT AND CUSTOMIZE IT TOO.

THE ONLY THING GOING AGAINST IT IS THE SHORT APPROX 20SEC BOOT UP TIME FOR IT. ANOTHER THING YOU WILL NOTICE IS AFTER YOU TURN OFF THE CAR THE RADIO BUTTON LIGHTS ARE STILL ON BECAUSE IT IS SHUTTING DOWN LIKE A COMPUTER..TAKES ABOUT 15SECS...THEN LIGHTS OUT.
