**HOW TO: aim HID headlights**

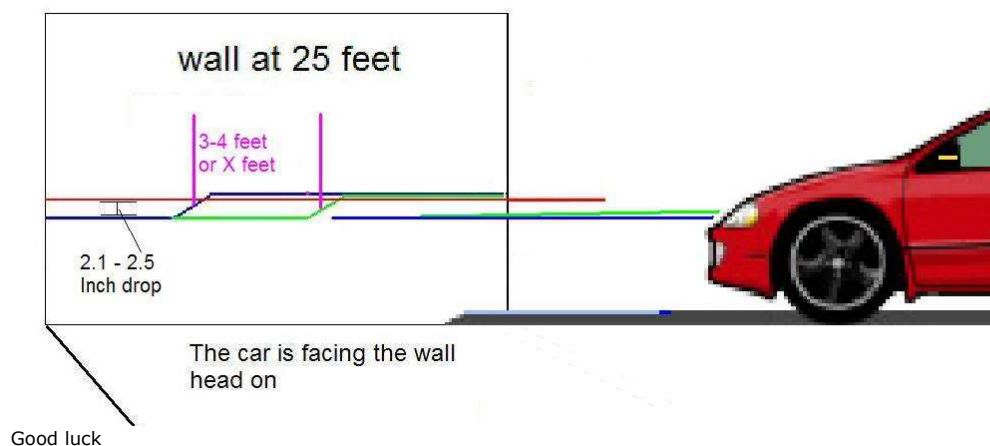

I came up with this diagram a while back. The others agreed it was accurate as a guide. The only value that may vary includes the width between the beams (pic says 3-4 feet) however that varies by each vehicle.

I think it should be fairly useful for members that want to use an aiming guide instead of asking around each time.

Drops from red line are the following.

DOT: 2.1-2.5 inch

ECE: 3 inch

Good luck

Ciprian

I think the top of the car view is very easy to understand.
