

SECTION 2-3

OPERATION OF INSTRUMENTS AND CONTROLS

Steering wheel and Mirrors

Tilt steering wheel	104
Outside rear view mirrors	104
Anti-glare inside rear view mirror	106
Auto anti-glare inside rear view mirror	107
Vanity mirrors	108

Tilt steering wheel

To change the steering wheel angle, hold the steering wheel, push down the lock release lever, tilt the steering wheel to the desired angle and push the lever up to lock the steering wheel in position.

CAUTION

- Do not adjust the steering wheel while the vehicle is moving. Doing so may cause the driver to mishandle the vehicle and an accident may occur resulting in death or serious injuries.
- After adjusting the steering wheel, try moving it up and down to make sure it is locked in position.

When you move the steering wheel, an electrical motor noise may be heard. This is the power steering motor noise, and is not a malfunction.

Outside rear view mirrors—

Adjust the mirror so that you can just see the side of your vehicle in the mirror.

Be careful when judging the size or distance of any object seen in the outside rear view mirror on the passenger's side because it is a convex mirror. Any object seen in a convex mirror will look smaller and farther away than when seen in a flat mirror.

When you touch the rear window defogger switch, the heater panels in the outside rear view mirrors will quickly clear the mirror surface. (See "Rear window and outside rear view mirror defoggers" on page 118.)

—Power rear view mirror control

CAUTION

- Do not adjust the mirror while the vehicle is moving. Doing so may cause the driver to mishandle the vehicle and an accident may occur resulting in death or serious injuries.
- Since the mirror surfaces can get hot, keep your hands off them when the defogger switch is on.

To adjust a mirror, use the switches.

1. Master switch—To select the mirror to be adjusted
Push the switch to “L” (left) or “R” (right).
2. Control switch—To move the mirror
Push the switch in the desired direction.

The mirrors can be adjusted when the hybrid system is in “ACC” or “IG-ON” mode.

NOTICE

If ice should jam the mirror, do not operate the control or scrape the mirror face. Use a spray de-icer to free the mirror.

—Folding rear view mirrors

The rear view mirrors can be folded backward for parking in compact areas. To fold the rear view mirror, push backward.

Do not drive with the mirrors folded backward. Both the driver and passenger side rear view mirrors must be extended and properly adjusted before driving.

Anti-glare inside rear view mirror

Adjust the mirror so that you can just see the rear of your vehicle in the mirror.

To reduce glare from headlights of the vehicle behind you during night driving, operate the lever on the lower edge of the mirror.

Daylight driving—Lever at position 1

The reflection in the mirror has greater clarity at this position.

Night driving—Lever at position 2

Remember that by reducing glare you also lose some rear view clarity.

Do not adjust the mirror while the vehicle is moving. Doing so may cause the driver to mishandle the vehicle and an accident may occur resulting in death or serious injuries.

Auto anti-glare inside rear view mirror

Adjust the mirror so that you can just see the rear of your vehicle in the mirror.

This mirror is equipped with auto anti-glare function. The function is designed to reduce glare from the headlights of the vehicle behind you during night driving.

When the hybrid system is in the "IG-ON" mode, the inside rear view mirror always turns on in the automatic function mode.

The green indicator illuminates to show you that the function is on.

In automatic function mode, if the mirror detects light from the headlights of the vehicle behind you, the mirror surface darkens slightly to reduce the reflected light.

To turn off the automatic function, push the "○" switch.

To turn on the automatic function again, push the "I" switch.

Adjust it before driving so that the rear view is in the best condition.

When the inside air temperature is low, it may take a little longer for the mirror to darken in response to the detection of headlights.

CAUTION

Do not adjust the mirror while the vehicle is moving. Doing so may cause the driver to mishandle the vehicle and an accident may occur resulting in death or serious injuries.

To ensure correct functioning of an anti-glare mirror sensor located on the back side of the mirror, do not touch or cover the sensor with your finger or a piece of cloth, etc.

Vanity mirrors

To use the vanity mirror, swing down the sun visor and slide the cover.

To turn on the vanity light, slide the switch.

The vanity light switch has the following positions:

“ON”—Turns the light on when you swing down the sun visor. However, if the visor has been slid out, the light may not come on.

“OFF”—Turns the light off.
